

Your Best Data Collection Solution Partner

IT7000

Portable Data Terminal

PDA-Style Data Collection

Built-in Barcode Scanner

RFID Capable

A New Generation of Handheld Terminal

Computing Without Boundaries

The new IT7000 blurs the lines between a PDA and a full-fledged portable data terminal. Setting a new standard for data collection devices, this terminal combines compact size and robust performance in a handheld design that's built to adapt to a business's changing data collection needs.

At its most essential, the IT7000 is an industrial strength PDA perfectly suited for your most demanding mobile applications. Add in a scanner or imager of your choice and this unit boasts the ability to capture data in the office or in the field. Attach its ruggedized pistol grip with scan trigger and you've got a dedicated data collection terminal that is second to none. Finally, pop in an RFID reader card* and you've got the latest in high tech data collection capabilities, future-proofing your current investment.

Product Applications

- Route Accounting
- Financial Exchange & Trading Floor Services
- On-site and Remote Inventory in Warehousing
- Dispatch and Routing in Transportation
- Portable Point-Of-Sale in the Hospitality Industry
- Rooming Agent Services in the Airline & Railway Industries

At the core of the new IT7000 lies a host of trusted technologies and user requested features. Built around an Intel® XScale™ PXA255 400MHz processor and running on Microsoft™ Windows CE .NET, the IT7000 provides enough processing power to deploy mobile applications anywhere in the enterprise. Superior power management capabilities provide extended battery life resulting in a terminal that won't stop working until you do. With its IP64 rating, 1.2 m (4ft) repeated drops to concrete, and wide operating temperature range the IT7000 will keep on working in even the harshest of environments.

This unit's super-bright, high contrast color screen works equally well indoors and out while the integrated touchscreen provides for pen-based input and handwriting recognition. A user accessible Compact Flash (CF) slot and a Secure Digital (SD) slot keep the IT7000 flexible and easily upgradable.

The challenges of today's business environment requires effective data collection at every point in the supply chain. From field services and route accounting to manufacturing and warehousing, the IT7000 meets the challenge with unparalleled power, performance and flexibility.
