IMPLANTERS

IM-100 Implanter, general purpose

A general purpose implanter designed for use with the ID-100 transponder and needles. The IM-100 features a safety lock which precludes unintended depression of the plunger. (Pictured upper right)

DIMENSIONS

Length:	11.5 cm (4.5 in.)
Diameter:	2.5 cm (1.1 in.)

IM-200 Implanter, light duty*

The IM-200 is based on a standard syringe and is used in low-duty applications (pictured upper left).

IM-300 Implanter, pistol grip*

A general purpose implanter designed for use with the ID-100 transponder and needles. The IM-300 features pistol-grip ergonomics, which makes the implanter easy to handle. There is no locking mechanism.

RAL-200 Ralo Gun*

A pellet injector implanter, the RAL-200 can be used in any position - no shaking or other manipulation is needed after the needle is inserted. Pulling the trigger automatically forwards to the next transponder. CAR-200 plastic cartridges (must be ordered separately) can be removed for replenishment with the transponders. For larger implant projects, several cartridges can be pre-stocked for in-field replacement. (Pictured at bottom).

DIMENSIONS

Length:	15.2 cm (6 in.)
Width:	14 cm (5.5 in.)
Depth:	1.5 cm (0.6 in.)
Diameter:	6.3 cm (2.5 in.)

CAR-200 Ralo Gun Cartridge Wheel*

These are plastic cartridge wheels for use with the ID-100A transponders and the RAL-200 RaloGun.

CAPACITY

25 transponders

BTS-1000 Fixed-mounted Multi-implanter*

This fixed-mounted multi-implanter is designed for use in fish, but can also be used for other applications which require high-speed implantation of large numbers of transponders. It is hydraulically powered using a pedal.

CAPACITY

150 transponders/clip
